## Introduction

The ACHA-National College Health Assessment II (ACHA-NCHA II) is a national research survey organized by the American College Health Association (ACHA) to assist college health service providers, health educators, counselors, and administrators in collecting data about their students' habits, behaviors, and perceptions on the most prevalent health topics.

ACHA initiated the original ACHA-NCHA in 2000 and the instrument was used nation wide through the spring 2008 data collection period. The ACHA-NCHA now provides the largest known comprehensive data set on the health of college students, providing the college health and higher education fields with a vast spectrum of information on student health.

The revised survey, the ACHA-NCHA-II, was developed following a thorough pilot testing process. Although the general categories of information for which data are collected remain the same between the original ACHA-NCHA and this revised survey, a number of questions have been modified, and new questions have been added to monitor a variety of health constructs. Specific revisions include updated lists of illegal drugs, contraceptive methods, and vaccines. New items have been added to capture sleep behaviors, self-injury, the use/abuse of prescription drugs and additional mental health issues.

Please note the ACHA-NCHA II is not appropriate for trend comparison of items from the original ACHA-NCHA survey. A new baseline for ACHA-NCHA II began in the fall of 2008. Directly comparing pre- and post-redesign estimates on similar data points, without taking into account the impact of the survey's redesign, might lead to an erroneous conclusion. Documentation regarding the results of the pilot study and differences between the instruments can be obtained at the ACHA-NCHA website, www.acha-ncha.org.

For additional information about the survey's development, design, and methodology, email Mary Hoban, PhD, CHES, (mhoban@acha.org), E. Victor Leino, PhD (vleino@acha.org), or visit www.acha-ncha.org.

#### Note on use of data:

Missing values have been excluded from analysis. Students responding "not applicable" were excluded from several analyses, which are specifically noted throughout this document. All response categories were included, including "don't know" or "0" unless otherwise noted.

This Executive Summary highlights results of the ACHA-NCHA II Spring 2013 survey for Santa Rosa Junior College consisting of 998 respondents. The overall response proportion was 100.0%.

## **Findings**

## A. General Health of College Students

- $\blacksquare$  54.3 % of college students surveyed ( 60.9 % male and 51.8 % female) described their health as very good or excellent.
- $\blacksquare$  88.6 % of college students surveyed ( 91.4 % male and 87.9 % female) described their health as good, very good or excellent.

Proportion of college students who reported being diagnosed or treated by a professional for any of the following health problems within the last 12 months:

Allergies:	19.3 %	Hepatitis B or C:	1.0 %
Asthma:	11.1 %	High blood pressure:	6.0 %
Back pain:	18.4 %	High cholesterol:	3.6 %
Broken bone/Fracture/Sprain:	8.8 %	HIV infection:	0.5 %
Bronchitis:	5.4 %	Irritable Bowel Syndrome:	2.8 %
Chlamydia:	2.8 %	Migraine headache:	9.3 %
Diabetes:	1.9 %	Mononucleosis:	1.1 %
Ear infection:	6.2 %	Pelvic Inflammatory Disease:	0.5 %
Endometriosis:	1.4 %	Repetitive stress injury:	3.6 %
Genital herpes:	1.3 %	Sinus infection:	8.5 %
Genital warts/HPV:	1.1 %	Strep throat:	6.5 %
Gonorrhea:	0.6 %	Tuberculosis:	0.5 %
		Urinary tract infection:	8.9 %

■ 50.4 % of college students ( 43.4 % male, 56.9 % female) reported being diagnosed or treated by a professional with one or more of the above conditions within the last 12 months.

Proportion of college students who reported any of the following:

Attention Deficit and Hyperactivity Disorder (ADHD)	7.9 %
Chronic illness (e.g., cancer, diabetes, auto-immune disorders)	4.0 %
Deafness/Hearing loss	3.4 %
Learning disability	10.8 %
Mobility/Dexterity disability	2.8 %
Partial sightedness/Blindness	2.8 %
Psychiatric condition	5.2 %
Speech or language disorder	1.5 %
Other disability	5.9 %

#### **B.** Disease and Injury Prevention

College students reported receiving the following vaccinations (shots):

- 57.7 % reported receiving vaccination against hepatitis B.
- 35.4 % reported receiving vaccination against Human Papillomavirus/HPV (cervical cancer vaccine).
- 38.2 % reported receiving vaccination against influenza (flu) in the last 12 months (shot or nasal mist).
- 47.2 % reported receiving vaccination against measles, mumps, rubella.
- 32.9 % reported receiving vaccination against meningococcal meningitis.
- 46.3 % reported receiving vaccination against varicella (chicken pox).

Other disease prevention practices reported by college students:

- 64.7 % reported having a dental exam and cleaning in the last 12 months.
- 26.4 % of males reported performing a testicular self exam in the last 30 days.
- 28.5 % of females reported performing a breast self exam in the last 30 days.
- 42.5 % of females reported having a routine gynecological exam in the last 12 months.
- 39.9 % reported using sunscreen regularly with sun exposure.
- 36.4 % reported ever being tested for Human Immunodeficiency Virus (HIV) infection.

College students reported the following behaviors within the last 12 months:

Percent (%)	N/A, did not do this activity within the last 12 months	Never*	Rarely or sometimes*	Mostly or always*
Wear a seatbelt when				
you rode in a car	0.5	0.3	2.0	97.7

- 3.7 % of college students reported driving after having 5 or more drinks in the last 30 days.\*
- 29.2 % of college students reported driving after having any alcohol in the last 30 days.\*

Estimated Blood Alcohol Concentration (or eBAC) of college students reporting 1 or more drinks the last time they "partied" or socialized. **Students reporting 0 drinks were excluded from the analysis**. Due to the improbability of a student surviving a drinking episode resulting in an extremely high eBAC, all students with an eBAC of 0.50 or higher are also omitted from these eBAC figures. eBAC is an estimated figure based on the reported number of drinks consumed during the last time they "partied" or socialized, their approximate time of consumption, sex, weight, and the average rate of ethanol metabolism.

Estimated BAC	Percent (%)	Male	Female	Total
